Online food ordering is the process of ordering food through the restaurant's own website or mobile app, or through a multi-restaurant's website or app. A customer can choose to have the food delivered or for pick-up. The process consists of a customer choosing the restaurant of their choice, scanning the menu items, choosing an item, and finally choosing for pick-up or delivery. Payment is then administered by paying with a credit card or debit card through the app or website or in cash at the restaurant when going to pickup. The website and app inform the customer of the food quality, duration of food preparation, and when the food is ready for pick-up or the amount of time it will take for delivery.

Below is the step by step process that explains: **How does online food ordering system work?** Just follow these steps and see how a user can order food online through your website.

STEP #1: USER ENTERS YOUR WEBSITE.

Whenever user feels hungry, instead of going out and searching for food, simply he/she can enter your website or ordering platform in his/her laptop or mobile phone.

STEP #2: SELECTS FAVORITE DISH

All the available food items with the respective prices will be displayed online in the food ordering system (website) itself.

There is nothing like someone will come and explain the menu. So without any hurry, user can easily go through your online menu and can choose his/her favorite dish.

To increase users convenience, some websites also provide the delivery time option from where an user can select the exact delivery time as per his/her availability.

STEP #3: ADD ITEMS TO CART

After selecting the dishes, the next step is to add those particular food items to cart. In this cart page it clearly displays the total price of food items that the user has selected along with the individual item price.

Here user can easily add/remove items or can increase the item quantity as per the requirement. This mainly helps the user to order exactly within the available budget.

STEP #4: PAY AND ORDER ONLINE

So after this, the next step is to provide the delivery address and pay for the food that the user is going to order. User can directly pay the amount online through the integrated payment gateways from where the amount gets credited into your account.

Once the user makes payment, the order gets confirmed and you will be notified about the new order instantly along with the user. Certain food companies even provide the cash on delivery (COD) method, where the user makes payment after food delivery.

STEP #5: FOOD PREPARATION AND DELIVERY

As soon as the order gets placed, you will be notified about the new order, delivery time etc., through sms or an email. This makes you easy to prepare food on a priority basis without any difficulty.

And lastly after preparing food, you can safely deliver it to the user through an online food delivery system. Also user can easily track his/her food orders at anytime with this food delivery system.
